

Scenario:

You have a long-standing tradition of going out with a group of friends on wednesday night, and you are tired of having to deal with the check splitting it between all the people in the group. You would like a painless way to split the bill between everybody.

Task 1:

Choose whether you want to join a payment group or make one. (making a payment)

Task 2:

Add group members to the payment by their phone numbers or usernames.

Task 3:

You enter the bill total after adding all of the members and assign a percentage for each member to pay.

Task 4:

Now everyone gets a notification to pay their part and you can close out the bill.

Notes:

Changes:

1. Allow a group to be saved for repeated payments
2. Implement the games into the splitting
3. Save recent members you've had in a group

Stay the Same:

1. Keep the ability to join a group and not just start one
2. Keep the ability to pay using just phone number so account not required
3. Keep the ability to assign each member different percentage requirements for the bill
